

Shanuka Gallage *Aspiring DevOps & SRE Engineer Intern*

✉ uni.shanuka@gmail.com ☎ 078 9545 450 📍 Kelaniya, Sri Lanka 🌐 Shanuka Gallage
🌐 www.shanuka.dev 🔄 ShanukaGallage 📄 Shanuka Gallage 📧 shanuka.gallage

A 3rd-year undergraduate pursuing B.Sc. (Hons) in Information Technology. Demonstrated expertise in AWS, Kubernetes, and IaC through 5 production-grade projects. Active open source contributor. Seeking DevOps & SRE internship to apply cloud-native engineering skills in enterprise environments.

🎓 EDUCATION

University of Kelaniya,
B.Sc. (Hons) Information Technology
01/2025 – 12/2028 | Kelaniya, Sri Lanka

- AIESEC in Colombo North
- IEEE SB in University of Kelaniya
- AWS Club in UoK
- FOSS Community

St. Thomas' Collage - Matara
01/2012 – 08/2022 | Matara, Sri Lanka
3B's for Advanced Level
9A's for Ordinary Level

📜 CERTIFICATES

AWS Certified Solutions Architect – Associate (SAA-C03): Amazon Web Services • March 2026 • Credential ID: XXXXX • Verify [↗](#)

Certified Kubernetes Administrator (CKA): The Linux Foundation • August 2026 • Credential ID: XXXXX • Verify [↗](#)

Azure Administrator: Microsoft • May 2026 • Credential ID: XXXXX • Verify [↗](#)

FinOps Certified Practitioner: FinOps Foundation • August 2026 • Credential ID: XXXXX • Verify [↗](#)

🛠️ TECHNICAL SKILLS

Cloud Platforms & IaC:
AWS, Azure, GCP, Oracle | Terraform, Ansible

Containers & Orchestration:
Docker, Kubernetes(Basic)

Automation, DevOps & Observability:
GitHub Actions, Jenkins, Linux, Bash Scripting, Git, Prometheus, Grafana

Development Stack:
C++, Python, Java, Go, React, TS, JS, Node.js

🏆 AWARDS

2nd Runner-Up Edify ID Article Competition, *Exposition Issue 22'*
03/2026

Finalist - HackX 11.0 National Hackathon Series, *University of Kelaniya*

Earned Supercontributor Badge, *Hacktoberfest - DigitalOcean*

💼 PROFESSIONAL EXPERIENCE

Software Engineer [Volunteer], *AIESEC in Sri Lanka - National Development Team* [↗](#)
02/2026 – Present | Maharagama, Sri Lanka

- Select among island wide selection pool.
- Developed dashboards that helps to increase productivity in each entities.
- Awarded as a team in global ceremony

Web Developer [Part Time], *Niko Web Solution* [↗](#)
07/2026 – Present | Matara, Sri Lanka

- We've completed 10+ projects across industries, delivering quality websites that drive results and elevate brands.
- Build website reliable monitoring system to manage all website the company have builded.

📁 PROJECTS

Web Service Reliability & Client Management Platform,
Individual Software Development Project
Client: *Niko Web Solutions Pvt. Ltd.* | Supervisor: *Dr. Chathumi Kavirathne* | *A+ Project*

- Automated health checks on all client websites every 5 mins
- Real-time dashboard showing uptime status per client site
- Instant alerts via email & Telegram when a site goes down
- SSL certificate expiry warnings (30 days in advance)
- Automated monthly performance report per client - delivered as PDF
- Client management - link each website to the respective client

Tech Stack: *React, CSS, TS, HTML, Node.js, AWS S3, Docker, Github Action, Resend, Neon, PostgreSQL, Prisma*

Intelligent Kubernetes Monitoring Platform | GitHub | Live Demo

- ML-powered monitoring system reducing alert noise by 75% through intelligent anomaly detection
- Implemented Isolation Forest algorithm for real-time anomaly detection across 15+ metrics (CPU, memory, network, application latency)
- Automated threshold adjustment based on historical patterns and seasonality, eliminating manual configuration
- Deployed monitoring stack on Kubernetes with 99.9% uptime, handling 500K+ metric samples per minute

Technologies: *Kubernetes, Prometheus, Grafana, Python,, Helm, Docker, AWS EKS*

Cloud-Native Microservices Application | GitHub | Live Demo

- Developed RESTful microservices application with 3 independent services (frontend, backend API, database)
- Containerized application using multi-stage Docker builds, reducing final image size by 60%
- Automated testing (unit + integration + e2e) and deployment using GitHub Actions with 95% code coverage
- Deployed on AWS with RDS database, S3 for static assets, and ALB for traffic distribution

Technologies: *Java Spring Boot, React, Docker, GitHub Actions, MySQL, AWS (EC2, RDS, S3, ALB)*

ML-Powered Log Analysis System | GitHub

- Developed intelligent log analyzer using K-Means clustering to group similar errors, reducing MTTR by 40%
- Applied TF-IDF vectorization and NLP techniques to classify and analyze 100,000+ log entries daily
- Built suggestion engine providing root cause analysis based on historical incident data with 78% accuracy
- Created REST API (Flask) and React dashboard for operations team to query predictions and insights

Technologies: *Python, Scikit-learn, ELK Stack, NLP, Flask, React, Docker, Kubernetes*
